Education

Carleton University 2024 – 2027
Bachelor of Computer Science Honours: Cybersecurity Stream (Co-op), Minor in Statistics

University of Waterloo 2022 – 2024
Honours Mathematics; transferred to Carleton University

Technical Skills

Languages: Python, Java, JavaScript, TypeScript, SQL, C, PowerShell, Bash, R
Development: Git/GitHub, React, Next.js, Node.js, REST APIs, GitHub Actions, HTML/CSS
Testing: JUnit, Cypress, Cucumber, Test-Driven Development, Behaviour-Driven Development
Data & Automation: OpenCV, BeautifulSoup, Requests, Power BI, Power Automate, Microsoft Graph API
Systems & Security: Linux, TCP/IP, Wireshark, Active Directory, Microsoft Entra, Raspberry Pi

Experience

IT Student / Junior IT Technician Jul 2026 – Aug 2026
Town of Greater Napanee *Napanee, ON*

- Built a **PowerShell** automation pipeline integrating **NinjaOne**, **Microsoft Graph**, **SharePoint Online**, **Power Automate**, and **Power BI**; generated AI-powered event summaries and email alerts that increased security review frequency from **monthly to daily**
- Established the organization's GitHub practice across **4 repositories** with **70+ commits**, introducing Conventional Commits, structured logging, error handling, JSON configuration, and secret-hygiene practices
- Diagnosed and eliminated **two recurring server errors** responsible for over **20,000 event log entries per day**
- Documented automation workflows and **Microsoft Entra** credential rotation procedures to support secure maintenance and knowledge transfer

Technical Support Engineer Jan 2024 – Sept 2025
Lynxfield *Remote*

- Remotely accessed and reprogrammed devices to resolve technical issues, typically completing troubleshooting within **6 hours**
- Automated a recurring manual task with **Bash**, reducing time spent by an estimated **30%**
- Tested a pre-release **Flutter** application and documented software issues to support functionality and user-experience improvements
- Cross-checked **250+ client records** against source data and produced **30+ page reports** containing driver-performance metrics

Projects

AEAC Drone: Target Detection & Control | *Python, OpenCV, Raspberry Pi, TCP, Tailscale*
Blackbird UAV Club | *Carleton University*

- Built a **Python TCP** client-server system to control a gimbal camera and servos on a **Raspberry Pi** over **Tailscale**, including disconnect failsafes
- Developed a **Computer Vision (CV)** colour-detection pipeline with **OpenCV** using HSV thresholding and live-camera tools to tune parameters under varying conditions
- Experimented with developing AI model to identify targets

Stock Advisor Bot | *Python, BeautifulSoup, Requests*

- Built a **Python** application to collect financial data and score equities using price-to-earnings, dividend yield, and debt-to-equity ratios
- Evaluated the strategy through a **six-month backtest**, producing a **15.3% theoretical return** under the defined methodology

Get Off IG Bot | *Python, Instagrapi API, Cron, GitHub Actions*

- Built a **Python** bot using the **Instagrapi API**, Cron, and GitHub Actions to publish scheduled daily reminders

Hackathons & Awards

FastCTX | *MCP, AI Agents* Jul 2025
AI Tinkerers Hackathon Ottawa

- Won **two first-place awards**: Best Implementation of MCP in a Coding Agent and Best Ambient / Async Agent
- Built a Model Context Protocol (MCP) integration for a coding agent. Concept to working prototype in **less than 8 hours**

Photo Fitness | *Computer Vision, Prototyping* Sept 2024
Hack the Hill II

- Built a **Computer Vision** fitness application prototype during Hack the Hill II
